

Tiny Houses Session Photos

WHY ECO-FRIENDLY BUILDING?

- **C&D Materials (Construction & Demolition Materials)**
 - 569 million tons of C&D debris were generated in the United States in 2017, which is more than twice the amount of generated municipal solid waste.
 - Demolition represents more than 90 percent of total C&D debris generation, while construction represents less than 10 percent.
- Has anyone ever heard of a **NET-ZERO** house?
- What recycled building materials will you use today with your build?
